

1st International Conference on Sustainable Fisheries (ICSF) 2019

Wetland Fisheries for Food Security

26-28 August 2019

CALL FOR ABSTRACT

Wetlands such as river, floodplain, mangrove, haor, baor, estuary and coral reef are among the most productive natural ecosystems on earth. Besides regulating and supporting services, wetlands are considered as very important sources for fisheries provisioning services as spawning, nursery, feeding grounds for fish, birds, invertebrates and mammals. Thus, wetland fisheries plays a critical role in providing food security to dependent communities and wider society. However, the health of wetlands being affected by several types of disturbances. The conference will be an interactive platform for scientists, policy makers, environmental managers, industries and all those interested in wetland fisheries and food security to discuss and share ideas and knowledge. We invite you to participate in the 1st ICSF 2019 in Sylhet!
